EXAMPLE DAO · council key workshop · SAMPLE

TESTNET4 ONLY

Step by step, for the organiser and each council member. Print single-sided at 100%, then cut out the cards.

Each sheet has three cards. Cards 1 and 2 are a ready-made key, made on a computer for this test: quick to use, never for real funds. Card 3 is for a key of your own, made on the SeedSigner with dice, as a real DAO's council does. The organiser says which of the two keys each council member gives EXAMPLE DAO.

Before the workshop (organiser)

1. **SeedSigner ready.** Firmware 0.8.6. Settings → Advanced → Bitcoin network: Testnet, and turn on Persistent settings so it stays on Testnet after a restart.
2. **Cards and dice.** Print this file single-sided at 100%. Cut out each sheet's three cards. One die (or five) for the key of your own.
3. **Phones.** Each council member brings the phone and browser they will use for the DAO. The organiser prepares the founding on the EXAMPLE DAO site.

A. The ready-made key (cards 1 and 2), about 10 minutes

1. **Load it.** Main menu → Scan, and hold card 1 under the camera. Check the fingerprint shown is the one printed on card 1. Choose Done.
2. **Copy the words.** Seeds → your fingerprint → Backup Seed → View Seed Words. Write each word on card 2 against its number, in capitals; then check all 12 again. Write the fingerprint on card 2.

B. A key of your own (card 3), about 30 minutes

1. **Roll the dice.** Tools → New Seed → Dice rolls → 12 words: 50 rolls, entered one by one. The SeedSigner shows your 12 words: write them on card 3, against their numbers, in capitals.
2. **Check the words.** The SeedSigner asks some of them back. Then it shows the new key's fingerprint: write it on card 3.
3. **Copy the SeedQR.** Seeds → that fingerprint → Backup Seed → Export as SeedQR → Compact SeedQR. The screen shows the grid a section at a time, with its letters and numbers: fill in the same squares on card 3, in pen.
4. **Check the card.** Seeds → Discard, then Scan card 3: the fingerprint must be the one you wrote. If not, compare the grid square by square.

C. Give EXAMPLE DAO your key (either A or B, as the organiser says)

1. **Export the public key.** With that key loaded: Seeds → its fingerprint → Export Xpub → Multisig → Native Segwit → Sparrow. Scan the moving QR with your phone when the EXAMPLE DAO site asks for your treasury key. The phone shows the fingerprint: it must match.
2. **Clear the device.** Seeds → your fingerprint → Discard, or switch the SeedSigner off. It keeps nothing. Pass it on.

After the workshop

1. **Keep the cards apart,** at home, never photographed. Never type the words into a phone or computer. To sign a round, bring only the SeedQR card of the key you gave the DAO; its word card is the backup.

Ready-made keys: Key 1: a3376323 Key 2: ba565599 Key 3: 1098f2e4 Key 4: 3209c0ba Key 5: fd82e20c
